

The Phish Alert Button (PAB) is a new email plugin from KnowBe4 that gives you a safe way to handle actual or potential phishing emails. Using the PAB will forward any suspicious emails to the information security team for analysis and delete the email from your inbox, preventing future exposure.

How to find the PAB – Outlook desktop vs. Outlook on the Web vs. Outlook on Mobile Device

## Outlook (Desktop Version):

The Phish Alert Report button (highlighted in yellow) appears at the top right of your screen.
